

REQUIREMENTS DOCUMENT

Business App — Complete Feature & B

PURPOSE OF THIS DOCUMENT This document describes what the K.L. Electricals business application must do — its features, behaviours, rules, and workflows. It does not prescribe how to build it technically; those decisions are left entirely to the development team. Please read this document in full before beginning development. Every section describes a business requirement that must be reflected in the final application. When in doubt about any behaviour, refer back to this document.

1. PROJECT OVERVIEW

Parameter	Detail
Business Name	K.L. Electricals
Business Type	Electrical goods distribution — wholesale and retail
Location	Lakhtokia + Fatashil, Guwahati, Assam
Owners / Super Admins	Yash Agarwal + Manoj Agarwal (Papa) — equal authority
Staff Size	21 people across defined roles
Monthly Revenue (approx.)	■1.5 crore
Target	■100 crore revenue + 100 retail outlets by March 2028
Target App Launch	October / November 2026
Platforms Required	Android, iOS, Web (responsive)
Accounting Software	Tally Prime — real-time bidirectional sync required
Language	Hinglish UI acceptable; English for formal fields and reports

2. USER ROLES & ACCESS LEVELS

Every staff member logs in with a unique username and password. The application displays different screens, menus, and data fields based on the logged-in role. Some fields are entirely hidden (not just disabled) for certain roles — this is intentional and must be strictly enforced.

Role	Staff Member(s)	Critical Access Restrictions
Super Admin	Yash + Manoj (Papa)	Full access. All overrides. All reports. All approvals.
Order Manager	Manas	Order Queue: approve/reject/modify every order. Attendance management. Cash reconciliation.
Billing & Rates	Gaurav	Only person who can edit item rates. Invoice creation. Credit notes within 2 hours.
Accounts & EOD	Sibu	Purchase Tally entries. Cash EOD. Cheque management. GIT tracking. Cannot self-approve any entry.
Verify & Dispatch	Ajit	Physical verification of picked goods. Only person who can create dispatch sheet. Stock count.
Purchase Head	Sonu	Purchase receiving. Sales return handling. Rate fields are completely hidden — not visible at all.
Godown Help	Sujay, Dishal	Purchase receiving when Sonu is absent. Urgent picking assistance.
Pickers	Ashish, Rajesh, Hirak, Ganesh, Prabal	Pick items per Sales Order. Cannot access godown without a valid SO number.

Showroom	Pulen, Prabal	Walk-in customer orders. Estimates. Cash counter. KL Utsav Scheme registration.
Drivers	Kamal, Siva	View delivery route. Mark delivered/undelivered. Upload delivery photo.
Helpers	Shankar, Damodar	Shankar: loading. Damodar: cheque deposit + local market.
Salesman — Guwahati	Monu	All Guwahati dealers and customers. All customer types.
Salesman — ID/Builder	Prasenjit	Interior Designers, Builders, Architects only. Pan-Assam territory.
Salesman — Outside	Manish	18 outside locations: Nagaon, Hojai, Tezpur, Nalbari, Rangia, Pathshala, Bongaigaon, Kokrajhar, Dimapur, Jorhat, Golaghat, Dibrugarh, Lakhimpur, Silapathar, Dhemaji, Shillong, Silchar, Karimganj.

3. CUSTOMER TYPES & RATE LOGIC

The application has six customer types. Each type determines the rate column used for pricing, whether a commission agent must be tagged, and whether the KL Utsav scheme applies. When creating an order, the user selects the customer type from a dropdown. The application then behaves differently based on the selection as described below.

Customer Type	Who Is This?	Rate Source	Commission	Scheme	Cash Discount
Dealer	A registered shop owner who purchases from KL Electricals regularly.	Dealer rate column	No	No	Yes — see Section 3.3
Retail Direct	A walk-in customer who has come without any agent or referral.	Retail rate column	No	No	No
Retail Commission	A walk-in customer who has been brought in or referred by an electrician or interior designer acting as an agent.	Retail rate column	Yes — agent must be tagged. Wire 1%, Fan 3%, all else 10%.	No	No
Electrician Direct	An electrician or interior designer who is purchasing for their own use or stock — not bringing a customer.	Electrician rate column	No	Yes — KL Utsav Scheme. Purchase value adds to scheme automatically.	No
Builder Direct	A builder or contractor who has approached KL Electricals directly without any agent.	Builder rate column	No	No	No
Builder Commission	A builder or contractor who was referred to KL Electricals by an electrician, interior designer, or architect acting as an agent.	Builder rate column	Yes — agent must be tagged. Wire 1%, Fan 3%, all else 10%.	No	No

3.1 Commission Agent Window

When it appears

- This window opens automatically when the customer type selected is either Retail Commission or Builder Commission.
- The user cannot proceed with the order without completing this screen.

Agent Type Selection

- The user first selects the agent type: Builder Agent or Electrician / Interior Designer / Architect Agent.
- This selection determines which commission rate column is applied to the items in the order.

Agent Search

- The user searches for the agent by phone number.
- If the agent is found: a card appears showing the agent's name, profession, pending commission balance, and commission earned this month.
- If the agent is not found: an "Add New Agent" option appears. The user enters the agent's name, phone number, profession, and area. The agent is saved permanently in the system and automatically tracked for all future orders.

Commission Calculation

- Commission is calculated automatically for every item in the order:
- Wire products → 1% of sale value
- Fan products → 3% of sale value
- All other products → 10% of sale value

- The total commission for the order is displayed on screen for reference.

Important Rules

RULE: The agent's name and commission amount must never appear on the invoice. This information is for internal tracking only.

RULE: A customer cannot receive both a commission (as an agent) and a scheme reward (as a self-buyer) in the same transaction. The application must prevent this.

- Commission accumulates in the agent's ledger monthly. Payout requires approval from Yash or Manoj, after which Siby processes the payment.

3.2 Electrician Scheme Window (KL Utsav)

When it appears

- This window opens automatically when the customer type selected is Electrician Direct.

Registration Check

- The application checks whether this electrician is already registered in the KL Utsav Scheme.
- If not registered: the user is offered a one-tap registration option during this order.
- Registration date is recorded. If the registration falls within the first 30 days of the scheme launch, the system tags this member as an Early Bird automatically.

Qualifying Value Calculation

- For every order placed by an Electrician Direct customer, the application calculates the qualifying value as follows:
- Wire products → 50% of the purchase amount counts toward qualifying value
- All other products → 100% of the purchase amount counts toward qualifying value
- This qualifying value is added to the member's cumulative total after the order is billed.

Scheme Slabs

- ■50,000 qualifying value → Mixer Grinder
- ■1,00,000 → boAt Smartwatch
- ■1,50,000 → Microwave Oven
- ■2,50,000 → Smartphone
- ■5,00,000 → LED TV (32 inch)
- ■7,50,000 → 1-Ton Air Conditioner
- Only the highest slab reached is rewarded. Gifts are not cumulative.

Early Bird Upgrade

- If the member registered and made their first purchase within 30 days of the scheme launch, they receive a one-slab upgrade on their final reward.

Referral Bonus

- If an existing scheme member refers a new member, both the referring member and the new member receive ■5,000 added to their qualifying value.

Scheme Period

- The scheme runs for 90 days from the launch date. Gifts are distributed within 30 days of scheme end.
- Qualifying value = net purchase value after discount, before GST.

RULE: Scheme and commission cannot both apply to the same person in the same transaction.

3.3 Dealer Cash Discount

- Cash discount applies only to the Dealer customer type.
- The discount percentage is determined by how many days after the invoice date the dealer makes payment:
- 0 to 2 days → 2.5% discount
- 3 to 10 days → 2.0% discount
- 11 to 20 days → 1.0% discount
- More than 20 days → No discount
- Payment matching follows FIFO — the oldest unpaid invoice is settled first.

- When a qualifying payment is received, the application automatically generates a credit note for the applicable cash discount amount and syncs it to Tally.

NOTE: This discount is available only for Dealer type customers. It does not apply to any other customer type.

3.4 Outstanding & Credit Behaviour

Outstanding Display — Order Screen

- When a party is selected in the order window, their outstanding balance is displayed immediately in a Party Information Card.
- This card shows: Credit Limit, Amount Used, Amount Free, Last Order Date, and any overdue invoices.

60-Day Outstanding — Notification Only (Not Block)

- If a party has any invoice that is more than 60 days overdue, a prominent warning is displayed on the order screen:
- Example message: "Outstanding above 60 days: ■50,000 — Bora Traders has an overdue balance of ■50,000 outstanding for more than 60 days. Please review before proceeding."
- The order is NOT automatically blocked. The user can still proceed.

NOTE: This is a notification and awareness tool — not an automatic block. Yash and Manas are responsible for the decision to accept or decline the order.

Rate Below Cost — Notification Only

- If an item is priced below its cost price, the rate field turns red and Yash receives an automatic in-app notification.
- The order can still proceed. This is for awareness, not prevention.

4. SALES ORDER — COMPLETE FLOW

4.1 Order Creation

Auto-Populated Fields (user cannot edit)

- Date and time of order creation
- Name of the logged-in user (operator)

Party Selection

- User types the party name — live search from the Tally party master.
- On selection, the Party Information Card appears showing outstanding, credit, last order details, and any overdue invoices with the 60-day notification if applicable.

Customer Type

- Dropdown selection: Dealer / Retail Direct / Retail Commission / Electrician Direct / Builder Direct / Builder Commission.
- Selecting Retail Commission or Builder Commission → Commission Agent Window opens (see 3.1).
- Selecting Electrician Direct → Electrician Scheme Window opens (see 3.2).

Salesman

- If the party is already tagged to a salesman in the system, the salesman field is auto-filled and locked.
- If the party is new, the user selects from a dropdown. The salesman is then permanently tagged to this party.

Items

- User searches for items by name or brand — live search.
- Rate auto-populates based on the selected customer type.
- The previous rate (last sale price for this item) is displayed alongside for reference.
- Quantity can be entered via a stepper control or typed directly.
- Multiple items can be added.

Image Capture During Picking

- When a picker selects and physically handles a product from the godown, the application provides an option to take a photo of the material.
- This photo is stored against the sales order and is accessible to Yash, Manas, Ajit, and the relevant salesman.
- This is for quality assurance and confirmation that the correct material has been picked.

Duplicate Order Detection

- If a similar order for the same party was placed within the last 24 hours, the application displays a warning: "A similar order was placed for this party on [date] — SO-[number]. Please confirm this is a new order."
- The user must explicitly confirm before submitting.

Delivery Details

- "Delivered To" field: Mandatory. The name of the person who will physically receive the goods at the delivery address. This is not the party name — it is the name of the individual (e.g., Ramesh, shop assistant).
- Delivery Mode: Dropdown — KL Auto / Bhaara Auto / KL Scooty / Rapido.
- Urgency: 1–2 hours / 1–2 days.
- Special Instructions: Free text visible to the driver on their delivery screen.

Order Photo

- Optional: The user may photograph a handwritten order note for reference.

Payment Mode

- Options: Cash / UPI / Credit / Post-Dated Cheque / Split.
- Split mode: Individual payment mode fields appear, each with an amount. The total of all split amounts must exactly equal the invoice total. Submission is blocked if there is a mismatch.
- Credit mode: A blank signed cheque from the party must be uploaded. Submission is blocked if no cheque is uploaded.

Submission

- On submission, a Sales Order number is generated.

- The system syncs the SO to Tally automatically.
- Manas receives an in-app notification immediately.

4.2 Order Approval — Manas

- Every single order, without exception, must be approved by Manas before any further action can be taken.
- The invoice creation button is disabled until Manas approves the order.
- Manas receives a notification for every new order.
- In the Order Queue, Manas can: Approve (order proceeds), Reject (must provide a reason; submitter is notified), or Modify and then Approve.
- When approved, pickers receive a notification to begin picking.

4.3 Picking

- A picker assigned to the order receives a notification.
- The picking screen shows the items required, quantities, and rack locations.
- For each item, the picker selects one of three outcomes: Full (entire quantity obtained), Partial (partial quantity — actual quantity must be entered), or Not Found (item unavailable).
- When picking from the Berlia or Fan godown, the picker must first record the SO number in the physical godown register before picking begins.
- After addressing all items, the picker submits the task. Ajit receives a notification to begin verification.

Material Photo

- When a picker picks an item, the application provides the option to photograph the material before it is packed.
- The photo is saved against the SO and is viewable by authorised roles.

4.4 Physical Verification — Ajit

- Ajit physically counts every item that has been picked.
- He enters the counted quantity for each item in the application.
- If the counted quantity does not match the picked quantity, a mismatch is flagged and Yash receives an immediate notification. The order is not blocked — only Yash is informed.
- After verification, Ajit provides a digital signature and marks the order as Verified.
- Gaurav and Siby receive a notification that the order is ready for billing.
- Ajit does not have access to invoice creation.

4.5 Invoice Creation — Gaurav / Siby

- Invoice creation is only possible after Ajit has verified the order.
- Only Gaurav has the ability to edit item rates. The rate edit control is not visible to any other user.
- If a rate is below cost, the field highlights in red and Yash receives an in-app notification. The invoice can still be created.
- Three copies of the invoice are printed: Original (sent with goods), Duplicate (driver obtains party signature and returns), Triplicate (retained in billing file).
- For commission-type orders, the commission amount and agent name are not printed on the invoice under any circumstances.
- The invoice is automatically synced to Tally on creation.

4.6 Dispatch — Ajit

- Only Ajit can create the dispatch sheet. This option is not available to any other user.
- The dispatch sheet lists all billed and verified orders for the day.
- Orders are split into two routes: Kamal (South and Central Guwahati) and Siva (East, West, and North Guwahati).
- Loading sequence: The application supports reverse-loading logic. The stop that will be delivered last should be loaded first onto the vehicle. Ajit arranges the stop sequence; the application indicates the recommended loading order.
- Both drivers provide a digital signature on the dispatch sheet.
- Departure time is expected at 10:30 a.m. If drivers have not departed by this time, Yash receives an automatic notification.

4.7 Driver Delivery

- The driver's screen shows today's delivery stops. The sequence is flexible — the driver may visit stops in any order.
- For each delivery stop:
 - "Delivered To" field is mandatory. The driver must enter the name of the person who received the goods.
 - A photo of the delivered goods must be taken and uploaded. The Mark Delivered button is unavailable until the photo is uploaded.
 - No party signature is required. The photograph serves as delivery proof.
 - If delivery is unsuccessful, the driver selects a reason from a dropdown (shop closed, party unavailable, address incorrect, party refused, other) and uploads a photo as proof.
- Manas receives an immediate notification for every unsuccessful delivery.
- At the end of the day, the driver returns the dispatch sheet and signed duplicate invoices to Sonu.

4.8 Evening Update & EOD

- Sonu receives the dispatch sheet from the driver and updates the delivery status of each order.
- Ajit updates the application with final order statuses by 7 p.m. and sends a godown photo to Yash.
- Sibü sends the End of Day report by 7:15 p.m. every day without exception.
- The EOD report is auto-populated from the day's transactions. Sibü reviews it, reconciles cash, and submits.
- Cash reconciliation: Opening balance + Cash sales must equal closing balance. If there is a discrepancy, Sibü must resolve it before submitting.
- On submission, Yash and Manoj receive an in-app notification with a summary.
- If the EOD has not been submitted by 7:15 p.m., Yash receives an automatic alert.

5. PURCHASE — COMPLETE FLOW

Purchases arrive in five forms. The application must handle each differently with respect to Tally entry timing, GST handling, and GIT (Goods in Transit) tracking.

Type	Description	Tally Entry	GST Timer	GIT Tracking
L-B Local — Bill	Supplier visits godown. GST bill received at time of delivery.	Direct Purchase Voucher (Registered)	None	None
L-C Local — Challan	Supplier visits godown. Only delivery challan provided; GST bill to follow.	Unregistered Purchase → Convert when GST bill arrives	7-day countdown begins on submission	None
C Company Direct	Company's own vehicle delivers goods (e.g., Polycab van, Anchor representative). May carry bill or challan.	As above depending on document type	7-day if challan	None
O-B Outside — Bill	Goods arrive via transport/LR. GST bill received with the shipment.	GIT entry first (no Tally entry at bilty stage) → Purchase Voucher after goods physically received and Sonu verifies	None	Yes — tracked from PENDING to RECEIVED
O-C Outside — Challan	Goods arrive via transport/LR. Only challan received.	GIT entry → Unregistered Purchase after receipt → Convert on GST bill arrival	7-day countdown begins after physical receipt	Yes — tracked from PENDING to RECEIVED

5.1 Purchase Receiving — Sonu / Sujay / Dishal

Fields Required for All Purchase Types

- Purchase Type selection (dropdown): L-B, L-C, C, O-B, O-C
- Supplier or Company name (searchable from master)
- Bill number (if bill received), or Challan number (if challan received) — mandatory depending on type
- For outside purchases: Transport company name, LR/Bilty number, Date of dispatch, Expected arrival date
- Expected arrival is auto-suggested based on supplier city (e.g., Delhi + 5 days, Mumbai + 7 days), but editable.

Items Entry

- For each item: Item name, Bill Quantity (as stated on the invoice or challan), and Actual Quantity (physically counted by the receiver).
- These are always two separate fields. They may differ. The application records both values independently.
- If Actual Quantity is less than Bill Quantity: the shortage is flagged and noted.
- If Actual Quantity is more than Bill Quantity: the excess is flagged and noted.
- Condition field: OK / Damaged / Short / Excess.

Photos

- Photos of the received goods and the bill or challan are mandatory. Submission is blocked without them.
- For outside purchases, a photo of the bilty (LR copy) is also required.

Rate Visibility

- Rate fields are completely hidden on Sonu's login screen. Sonu sees item names and quantities only.

When Sonu is Absent

- Sujay or Dishal receives the goods and submits the entry under their own name.
- The order status becomes "Verification Pending."
- Sonu receives an in-app notification when he returns.
- Sonu must physically review the received goods, confirm quantities, and provide his verification before Sibun can proceed with the Tally entry.

RULE: Sibun cannot create the Tally purchase entry until Sonu has verified.

5.2 GIT — Goods in Transit Tracking

- When a bilty or LR number is received (typically via WhatsApp), Sibü immediately enters it into the application. No Tally entry is made at this stage.
- GIT Status Stages:
 - PENDING — Bilty recorded, goods not yet arrived.
 - ARRIVED — Transport has confirmed goods have reached Guwahati. Sibü or Sonu must then decide: collect from transport office, or wait for delivery.
 - RECEIVED — Sonu has physically received the goods in the godown.
 - ISSUE — Shortage, damage, or discrepancy found at the time of receipt.
- If expected arrival date passes and goods have not arrived:
 - 2 days overdue: Sibü receives a reminder to call the transporter.
 - 5+ days overdue: Yash receives an escalation notification.

Freight Tracking

- For each bilty, the following must be recorded: Freight type (Paid by supplier / To Pay), Freight amount in rupees.
- This allows the business to track freight payable per LR number and per transporter.

5.3 GST Bill Pending Tracker

- For all challan-type purchases (L-C, O-C), a 7-day countdown begins once the entry is submitted (for local) or once goods are received (for outside).
- The application displays a tracker showing all challan purchases awaiting their GST bill, with the number of days remaining.
- When Sibü receives the GST bill, he enters the bill number and the application converts the Unregistered Purchase to a Registered Purchase in Tally.
- If the GST bill has not been received within 7 days, both Yash and Sibü receive an automatic alert.

5.4 Rate Change Alert

- When Sibü reviews a purchase entry, the application compares the current purchase rate to the most recent previous purchase rate for the same item.
- If the rate has changed, an alert is displayed.
- Sibü can choose to hold the entry pending Yash's review, or to proceed. Yash receives a notification either way.

5.5 Sales Return

- A return can only be initiated against an existing invoice. The original invoice number is a mandatory field.
- On entering the invoice number, the application auto-populates the party name, original items, and original rates.
- The user selects which items are being returned and in what quantity.
- Return reason is mandatory: Wrong item delivered / Damaged in transit / Quality issue / Rate difference / Excess quantity / Changed mind / Not needed / Other.
- A photo of the returned goods is mandatory.
- On submission, Gaurav receives a notification. He has 2 hours to issue the credit note.
- If the credit note is not issued within 2 hours, Yash receives an automatic alert.
- The credit note requires approval from Yash or Manoj before the party's ledger is updated in Tally.

6. ATTENDANCE MANAGEMENT

Shifts

- Shift A: 10:00 a.m. to 6:45 p.m. Grace period until 10:10 a.m.
- Shift B: 11:00 a.m. to 8:00 p.m. Grace period until 11:10 a.m.
- Sunday is a full day off. No attendance entry required.

Check-In Process

- The staff member opens the Attendance screen and taps Check In.
- GPS location is captured automatically. The staff member must also take a geotagged photograph. Check-in is blocked without the photograph.
- If check-in occurs after the grace period, the entry is automatically marked as Late and Manas receives an immediate notification.

Check-Out Process

- The staff member taps Check Out. A geotagged photograph is again required.
- Total hours worked are calculated and displayed.

Consequences (tracked by the system, applied by management)

- 3 instances of late arrival in a month → Written warning.
- 4 instances → ₹500 salary deduction.
- 5 or more instances → ₹1,000 deduction and a meeting.
- Absent without prior information → Double deduction.

Dashboard for Manas and Yash

- A live view of today's attendance: who is in, who is late, who is absent.
- Monthly attendance export available as PDF for salary processing.

7. ESTIMATES & QUOTATIONS

- Estimates can be created by salesmen in the field and by Pulen and Prabal in the showroom.

Estimate Creation

- Same item and rate selection process as an order. No approval required for estimates.
- A follow-up date is set at the time of creation (default: 3 days from creation).
- Validity is automatically set to 15 days from the creation date.

WhatsApp Sharing

- On saving the estimate, a professionally formatted PDF is generated and can be shared directly via WhatsApp to the party's registered phone number from within the application.
- The PDF includes item names, quantities, rates, total amount, validity date, and KL Electricals contact details.

Follow-Up

- The creator of the estimate is responsible for follow-up.
- On the follow-up due date, the creator receives a notification.
- After each follow-up attempt, the creator logs the outcome and sets the next follow-up date.
- Maximum 3 follow-up attempts.

Conversion

- An estimate can be converted to an order with one tap. All items and quantities carry forward into the order window.

Closure

- If the estimate is not converted within 15 days, or after 3 follow-up attempts, the creator must mark it as Lost and select a reason: Price too high / Purchased elsewhere / Budget constraints / Project cancelled / Not interested / Other.

8. SALESMAN MODULE

Daily Workflow

• Each salesman checks in at the start of the day using GPS and a geotagged photograph.
• The application displays a Beat Plan — a list of dealers and customers assigned for that day.
• At each dealer visit, the salesman checks in (GPS + photo at the dealer's location), conducts their visit, and checks out.
• If an order is placed, it is submitted through the standard order flow.
• If no order is placed, the salesman must record a visit outcome and reason.
Live GPS Tracking
• Yash and Manoj can view the live location of all three salesmen on a map at any time.
Beat Plan
• Assigned dealers are shown in a list. The salesman may visit them in any sequence.
• At the end of the day, any dealer not visited must have a reason recorded.
• Manas is notified of unvisited dealers.
Payment Collection
• Cash collected by a salesman must be deposited with Sibu on the same day.
• Cheques collected must be entered in the application and physically handed to Sibu.
Territories
• Monu: All of Guwahati, all customer types.
• Prasenjit: Interior Designers, Builders, and Architects only, pan-Assam.
• Manish: 18 locations outside Guwahati as defined by management.

9. SALESMAN INCENTIVE SYSTEM

Structure
• The incentive system is divided into 20 product segments. Each segment has a monthly sales target and a base incentive payout.
Achievement Slabs
• Below 90% of target achieved → ■0 incentive for that segment.
• 90% to 99% → 80% of the base incentive.
• 100% → Full base incentive.
• 101% and above → 110% of the base incentive (this is the maximum).
Payment-Linked Rule
• Incentive for a given sale is only counted if the corresponding invoice is paid by the customer within 60 days.
• If an invoice remains unpaid beyond 60 days, the sale value is removed from the salesman's target achievement for that segment.
• The application must track this continuously and update incentive projections accordingly.
Live Progress
• Each salesman can view their incentive progress in real time — which segments they have achieved, which are at risk, and the estimated total payout.
Payout
• At month end, Yash reviews and approves the incentive calculations in the application.
• Sibu processes the payout after approval.
• No advance payments are permitted without Yash's explicit in-app approval.
Showroom Incentive
• Pulen and Prabal share a combined incentive pool on the same 20-segment structure.
• Their wire-related targets are set at double those of field salesmen.
• The total earned incentive is split equally between the two.

Segment	Monthly Target	Base Incentive (100%)
KEI Wire 90 meter	■3,00,000	■1,000
KEI Wire 300 meter	■5,00,000	■1,500

Polycab Etira Wire	■3,00,000	■2,200
Orient Wire	■3,00,000	■2,500
Maru Wire	■1,50,000	■2,000
Anchor Modular	■5,00,000	■3,500
Wendorflex / ATC	■3,00,000	■4,500
Legrand Modular	■3,00,000	■3,000
Crompton Fans	■3,00,000	■1,500
CG Power Fans	■3,00,000	■2,250
Ezzair / Blu Fans	■1,50,000	■500
Precision Casing	4,000 pieces	■1,000
Anchor MCB	■2,00,000	■1,200
Havells MCB / SP	■2,00,000	■1,200
Polycab MCB / Box	■2,00,000	■1,000
Legrand MCB / Box	■2,00,000	■1,500
Berlia Pipes	■2,00,000	■800
Maru Accessories	■2,00,000	■800
Polycab LED	■1,50,000	■600
Others (all other products)	■2,00,000	■700
TOTAL AT 100%	—	■33,250 per month

10. DAILY STOCK COUNT

- Every day, the application randomly assigns 5 items to designated staff members (Ajit and Hirak) for a physical count.
- The staff member physically counts the assigned items in the godown and enters the count into the application.
- The application compares the physical count to the system stock level.
- If they match, the item is marked as verified.
- If there is a discrepancy, Yash receives an immediate in-app notification with details of the item and the variance.
- Results are stored and accessible in a Stock Count Report showing trends over time.

NOTE: The items assigned are random and change every day. Staff are not informed in advance which items will be selected. This is intentional.

11. CHEQUE MANAGEMENT

- When a cheque is received, Siby records it in the application: party name, cheque number, amount, bank name (party's bank), and due date.
- On the due date, Siby receives a 9 a.m. reminder notification.
- Siby selects the cheques to be deposited and specifies the KL bank account (ICICI / SBI / other) for each.
- Siby hands the physical cheques to Damodar with instructions.
- Damodar deposits the cheques, photographs the deposit slip, and uploads it in the application.
- Once the bank confirms clearance (2–3 days later), Siby marks the cheque as Cleared in the application. Tally is updated automatically.
- If a cheque bounces, Siby marks it as Bounced. Yash and the relevant salesman receive an immediate notification.

12. REPORTS

- The application must provide the following reports, accessible to authorised roles.
- Default date range for all reports is today. Any past date or date range must be selectable.
- All reports must be exportable as PDF and Excel.

Reports Required

- Daily Sales Report: Order-wise breakdown, cash vs credit vs UPI, driver-wise delivery status.
- Outstanding Report: Party-wise outstanding amounts grouped into 0–30 days, 31–60 days, and 60+ days buckets.
- Salesman Performance: Per salesman — orders placed, value, collections, target progress, conversion rate.
- Incentive Progress Report: All 20 segments, current achievement, estimated payout, payment-linked deductions.
- Purchase Report: Supplier-wise purchases, bill vs actual quantity comparison, freight tracking.
- Stock Report: Item-wise stock levels, items below minimum threshold.
- Cheque Report: All cheques by status — pending deposit, deposited, cleared, bounced.
- Cash Discount Report: Dealer-wise CD earned, credit notes auto-generated.
- Estimate Conversion Report: Estimates created, converted, lost, pending, reasons for loss.
- Party Transaction History: Full history for a single party — orders, payments, returns, outstanding.
- GIT Register Report: All outside purchases by GIT status, overdue items.
- Stock Count Report: Daily count results, match/mismatch history.

Yash Dashboard

- A live summary dashboard visible to Yash and Manoj showing: today's orders and status, live GPS of all salesmen, alert items requiring attention (stock low, rate below cost, overdue GIT, pending EOD), and total outstanding.
- Yash taps a "Mark Reviewed" button daily to confirm he has reviewed the dashboard. This timestamp is recorded.

13. NOTIFICATIONS

All notifications are delivered within the application only. No SMS or external WhatsApp messages are sent to staff. Notifications are role-specific — each user receives only the notifications relevant to their role.

Trigger	Recipient
New order submitted	Manas
Order approved	Submitter + Pickers
Order rejected	Submitter (with reason)
Picking complete	Ajit
Verification complete	Gaurav + Sibü
Order delivered	Manas + Sibü
Delivery unsuccessful	Manas (immediate)
Order pending 3+ days	Yash (escalation)
New purchase submitted	Sibü
Sonu absent — verification pending	Sonu (on return)
Purchase rate changed from previous	Sibü + Yash
GIT overdue by 2 days	Sibü (call transport reminder)
GIT overdue by 5+ days	Yash (escalation)
GST bill not received in 7 days	Yash + Sibü
Cash reconciliation mismatch at EOD	Yash (same day)
Cheque due today	Sibü (9 a.m.)
Cheque bounced	Yash + relevant salesman (immediate)
EOD not submitted by 7:15 p.m.	Yash
Sales return submitted — 2hr SLA started	Gaurav
Credit note not issued within 2 hours	Yash
Rate below cost on invoice	Yash (immediate)
Salesman late check-in	Manas
Dealer not visited in beat plan	Manas + Salesman (end of day)
Stock count mismatch	Yash (immediate)
Item below minimum stock level	Yash
Incentive milestone achieved (100%+)	Yash
Departure not logged by 10:30 a.m.	Yash

14. TALLY PRIME INTEGRATION

The application must maintain real-time bidirectional synchronisation with Tally Prime. The technical method of integration is at the development team's discretion.

Direction	What is Synced
App → Tally	Sales Orders (on approval)
App → Tally	Sales Invoices (on creation)
App → Tally	Credit Notes (on approval)
App → Tally	Purchase Vouchers (after Sonu verification)
App → Tally	Unregistered Purchases (challan type) and conversion on GST bill receipt
App → Tally	Cash Discount Credit Notes (auto, FIFO calculation)
App → Tally	Stock Journal for Internal Transfers (same day)
App → Tally	Payment receipts
App → Tally	New party and item creation
Tally → App	Party master (7,000+ parties)
Tally → App	Item master (7,300+ items)
Tally → App	Current stock levels
Tally → App	Outstanding balances per party
Tally → App	Historical purchase rates (for rate change alert)
Tally → App	Payment history (for FIFO cash discount calculation)

15. NON-NEGOTIABLE BUSINESS RULES

The following rules are absolute. They are not configurable settings — they are fixed behaviours that must be built into the application. No override mechanism should exist for these rules unless explicitly stated.

R-01	Every order must be approved by Manas	Invoice creation is blocked until Manas approves. No other user can approve an order.
R-02	Ajit must verify before invoicing	The invoice creation button is disabled until Ajit marks the order as physically verified.
R-03	Dispatch sheet: Ajit only	The option to create a dispatch sheet appears only on Ajit's account. No other user sees this function.
R-04	Rate editing: Gaurav only	Rate edit fields are visible and active only on Gaurav's account.
R-05	Sales Order required before godown access	A valid SO number must be entered in the physical godown register before picking begins. App enforces acknowledgement.
R-06	Photographs are mandatory throughout	Delivery photos, purchase receive photos, attendance photos, and cheque deposit slip photos are all mandatory. Relevant actions are blocked without them.
R-07	Sonu cannot see rates	Rate columns and values are completely hidden — not just greyed out — on Sonu's account.
R-08	Bill Quantity and Actual Quantity are always separate	Two distinct mandatory fields. Never merged. Both must be entered independently.
R-09	Sales returns require the original invoice	The original invoice number is a mandatory field. Returns cannot be processed without it.
R-10	Credit note within 2 hours	Gaurav must issue the credit note within 2 hours of a return being submitted. After 2 hours, Yash is notified automatically.

R-11	Rate adjustments require Yash or Manoj approval	Gaurav can initiate a rate adjustment but cannot approve it. Only Yash or Manoj can approve.
R-12	No document, no purchase entry	At least one photograph (bill or challan) must be uploaded. Submission is blocked without it.
R-13	Challan number is mandatory for challan purchases	If the purchase type is challan-based, the challan number field is mandatory.
R-14	Internal Transfer Tally entry: same day	Gaurav must create the Tally Stock Journal entry on the same day a transfer is received. If not done, Yash is notified the next day.
R-15	Sibu cannot self-approve	Any entry created by Sibu must be approved by a different user.
R-16	Below-cost pricing triggers a notification	If an item is billed below cost, the field is highlighted and Yash receives an immediate notification. The order can still proceed.
R-17	60-day outstanding: notification only, not a block	If a party has an invoice more than 60 days overdue, a prominent notification is displayed when creating their order. The order is not blocked. Management decides whether to proceed.
R-18	Incentive processing is app-only	No incentive advance is permitted without Yash's explicit approval within the application. Payouts are processed only through the app.
R-19	Incentive is payment-linked	If a customer invoice remains unpaid beyond 60 days, the sale amount is removed from the salesman's target for the relevant segment.
R-20	EOD is mandatory by 7:15 p.m.	If EOD is not submitted by 7:15 p.m., Yash receives an automatic notification.
R-21	Agent details are never printed on invoices	Commission agent names and commission amounts do not appear on any invoice. They are for internal records only.
R-22	Scheme and commission are mutually exclusive	A single transaction cannot trigger both the KL Utsav Scheme and a commission calculation. The application must prevent this.
R-23	Split payment totals must match the invoice	If a split payment is used, the sum of all individual payment amounts must exactly equal the invoice total. Submission is blocked if there is any discrepancy.

A. SALARY MANAGEMENT

The application must maintain a complete salary record for each employee. This includes their fixed monthly salary, any advances taken, monthly deductions arising from attendance violations or advance recovery, and the final net payable amount. The system tracks all of this automatically and presents a clear month-wise salary ledger for each employee.

A.1 Employee Salary Setup

Fixed Salary Entry

- Each employee's fixed monthly gross salary is entered by Yash or Manoj in the system.
- This is the base amount before any deductions or additions.
- The salary amount is editable only by Yash or Manoj. No other role can modify it.

Monthly Salary Ledger

- For every employee, the application maintains a month-wise salary ledger showing:
 - Fixed Salary (gross)
 - Advance Deduction (total advance recovered this month)
 - Attendance Deductions (late marks, half days, absences)
 - Other Deductions (if any — entered manually by Yash)
 - Net Payable = Fixed Salary – All Deductions
- EXAMPLE: Monu Fixed: ■18,000 | Advance recovery: ■2,000 | Late deduction: ■500 | Net Payable: ■15,500
- The net payable is clearly displayed on a single salary summary screen for each employee each month.
 - Yash marks salary as "Paid" after processing. The date of payment is recorded.

A.2 Salary Slip

- A salary slip is auto-generated for each employee at month end.
- It shows: Employee name, month, fixed salary, itemised deductions (advance recovery, late deductions, half-day deductions, absence deductions), and net payable amount.
- Yash can share the salary slip with the employee directly through the application.
- Salary slips are stored month-wise in the employee profile and can be accessed at any time.

B. ADVANCE MANAGEMENT

An employee may request a salary advance at any time. The advance is approved by Yash or Manoj, recorded in the system, and automatically recovered from the employee's salary in equal monthly instalments. The system handles all tracking — no manual calculation is needed.

B.1 Advance Request & Approval

Request

- An employee or Yash can initiate an advance request in the application.
- Fields required: Employee name, amount requested, reason (optional), and repayment duration (number of months over which the advance will be recovered).

Approval

- Advance requests are approved only by Yash or Manoj.

- On approval, the advance amount and repayment schedule are saved to the employee's profile. - The employee receives an in-app notification that their advance has been approved.
Repayment Schedule
On approval, the system automatically divides the advance into equal monthly instalments based on the repayment duration entered.
EXAMPLE: Advance of ₹6,000 over 3 months → ₹2,000 deducted from salary each month for 3 months.
Each monthly deduction is shown clearly in the salary ledger.
Advance Ledger
- Each employee has an advance ledger showing: - Date of advance, amount sanctioned, total recovered so far, and balance remaining. - This ledger is visible to Yash, Manoj, and the employee themselves. - Multiple advances can be active simultaneously. Each is tracked independently.

B.2 Advance Register View
- Yash can view an Advance Register showing all active advances across all employees. - For each advance, the register shows: Employee name, advance amount, date sanctioned, monthly deduction, months remaining, and balance outstanding. - This is a consolidated view — not per employee. - It is sortable by employee name, amount, and date.

C. ATTENDANCE — COMPLETE SPECIFICATION

Attendance is tracked daily using GPS-verified, geotagged photographs. No check-in is valid without a photograph taken at the moment of check-in. The system automatically calculates whether an employee is on time, late, on a half day, or absent — and applies the corresponding deductions to the monthly salary.

C.1 Shift Timings					
Shift	Employees	Start Time	Grace Until	End Time	Half Day Cut-off
Shift A	Gaurav, Ajit, Pulen, Prabal, Ashish, Rajesh, Hirak, Ganesh, Sujay, Dishal, Kamal, Siva, Shankar, Damodar, Monu, Prasenjit, Manish	10:00 a.m.	10:10 a.m.	6:45 p.m.	Punch-out before 6:00 p.m. = Half Day
Shift B	Manas, Siblu, Sonu	11:00 a.m.	11:10 a.m.	8:00 p.m.	Punch-out before 7:00 p.m. = Half Day

C.2 Check-In Process
Photograph — Mandatory
- When an employee taps Check In, the device camera opens automatically. - The employee must take a photograph of themselves at that moment. - The photograph is automatically geotagged with the GPS coordinates and timestamp at the moment it is taken. - The check-in is not recorded until the photograph is captured and uploaded. This cannot be bypassed.
Location Recording
- The GPS coordinates at the time of check-in are saved alongside the photograph. - For showroom and godown staff, check-in must occur within a reasonable proximity of the workplace. The application flags if check-in occurs at an unusual location. - For field salesmen (Monu, Prasenjit, Manish), the check-in location is recorded but not geofenced — they may check in from wherever they begin their day.
Timing Logic
- Check-in on or before the grace period end time → Marked as On Time. - Check-in after the grace period → Marked as Late. Manas receives an immediate notification.

- No check-in by 1 hour after shift start → Marked as Absent (unless leave has been applied). Manas receives an immediate notification.

C.3 Check-Out Process

- When the employee taps Check Out, the device camera opens automatically.
- A geotagged photograph is required. Check-out is not recorded without it.

Half Day Logic

- Shift A employees: If check-out is recorded before 6:00 p.m., the day is marked as a Half Day.
- Shift B employees: If check-out is recorded before 7:00 p.m., the day is marked as a Half Day.
- A Half Day deduction is applied to the monthly salary automatically.

EXAMPLE: Shift A employee checks out at 5:30 p.m. → Day marked Half Day → 50% of daily salary deducted.

Hours Worked

- Total hours worked are automatically calculated and displayed: Check-out time minus Check-in time.
- This is shown on the employee's attendance record for the day.

C.4 Attendance Deductions

- All deductions are calculated automatically by the system based on attendance records.
- Deductions are applied to the monthly salary and appear as line items in the salary ledger.

Deduction Rules

- Late arrival (1st and 2nd occurrence in a month) → Written record only. No financial deduction.
- Late arrival (3rd occurrence) → Written warning recorded in system. No financial deduction.
- Late arrival (4th occurrence) → ■500 deducted from monthly salary.
- Late arrival (5th or more occurrences) → ■1,000 deducted from monthly salary.
- Half Day → 50% of that day's salary deducted.
- Absent with prior information (leave applied) → Deduction as per leave policy.
- Absent without any information → Double the day's salary deducted.

NOTE: Daily salary for deduction purposes = Fixed Monthly Salary ÷ 26 working days.

Viewing Deductions

- Each deduction is shown as a separate line item in the monthly salary ledger.
- Yash can see all deductions before approving the final salary payout.
- Yash may manually waive any deduction with a reason. The waiver is logged.

C.5 Monthly Attendance Summary

- For each employee, a monthly attendance summary shows:
- Total working days in the month
- Days present (on time)
- Days late (with count)
- Half days taken
- Days absent (with information)
- Days absent (without information)
- Total deductions arising from attendance
- This summary feeds directly into the salary ledger.
- Exportable as PDF for records.

Manas Dashboard

- Manas sees a daily attendance dashboard: who is present, who is late, who is absent.
- Colour coded: Green (present, on time), Amber (late), Red (absent), Grey (not yet checked in).

C.6 Leave Management

- An employee can apply for leave through the application.
- Leave request shows: Employee name, date(s) of leave, and reason.
- Leave is approved by Manas (for Shift A staff) or Yash (for all senior staff).
- Approved leave days are not marked as absent-without-information.
- Sunday is a full weekly off and is not counted in attendance calculations.
- The application must account for public holidays if entered by Yash.

D. SALESMAN GPS & ORDER LOCATION TRACKING

All three field salesmen — Monu, Prasenjit, and Manish — are tracked via GPS throughout the working day. Every order placed by a salesman in the field must have the salesman's GPS location recorded and saved against that order at the moment of submission.

D.1 Live GPS Tracking

- GPS location of Monu, Prasenjit, and Manish is tracked continuously during working hours.
- Yash and Manoj can view the live location of all three salesmen on a map at any time from the dashboard.
- Location tracking is active from check-in to check-out.
- If a salesman's GPS signal is lost for more than 15 minutes during working hours, Manas receives a notification.

D.2 GPS Location Saved with Every Order

Order Location Capture

- When a salesman submits an order from the field, the application automatically captures and saves the GPS coordinates at the exact moment the order is submitted.
- This location is stored as part of the order record permanently.
- It cannot be edited or deleted after submission.

What is Recorded

- GPS coordinates (latitude and longitude) at time of order submission
- Name of the location or nearest landmark (reverse geocoded from coordinates)
- Timestamp of submission
- Salesman name

How it is Used

- Yash can view, for any order, exactly where the salesman was when the order was placed.
- This is visible on the order detail screen as a map marker.

EXAMPLE: Order SO-147 submitted by Monu at 11:32 a.m. — Location: Basistha, near Sharma Electricals.

- In the Salesman Performance Report, orders can be filtered by area/location.
- This helps management verify that the salesman was genuinely at the dealer's premises when the order was placed.

Beat Plan Check-In

- When a salesman checks in at a dealer's location in the beat plan, the GPS coordinates are recorded.
- The application verifies that the salesman is physically present near the dealer's registered address.
- If the check-in location is significantly different from the dealer's address, a flag is raised.
- Yash can review flagged check-ins.

D.3 Salesman Daily Location History

- For each salesman, a daily route map is available showing all locations visited during the day.
- The route shows: Check-in location, each dealer visited (in sequence), order locations, and check-out location.
- Yash can view this for any salesman for any past date.
- This provides full accountability for the salesman's field activity.

E. ADDITIONAL NON-NEGOTIABLE RULES

R-24	Check-in requires a geotagged photograph	The check-in is not recorded until the employee takes and uploads a photograph at check-in time. GPS coordinates are automatically embedded. This cannot be bypassed.
R-25	Check-out before shift end = Half Day	Shift A: Check-out before 6:00 p.m. = Half Day deduction. Shift B: Check-out before 7:00 p.m. = Half Day deduction. Applied automatically to salary.
R-26	Every field order must carry a GPS location stamp	When a salesman submits an order, the application captures and permanently saves the GPS location at that moment. This is not optional and cannot be edited post-submission.
R-27	Advance approval: Yash or Manoj only	No advance can be disbursed without in-app approval from Yash or Manoj. The repayment schedule is set at approval and recovered automatically each month.
R-28	Salary deductions are auto-calculated	Late marks, half days, absences, and advance recoveries are all computed by the system and applied to the monthly salary ledger automatically. Yash reviews and may waive individual deductions before final payout.
R-29	Absent without information = double deduction	If an employee does not check in and has not applied for leave, the day is marked as absent without information. The deduction is double the standard daily rate.
R-30	Salary is finalised and paid only after Yash approval	The net payable salary for each employee each month is reviewed and approved by Yash before any payout is processed. The approval and payment date are recorded in the system.
